
Limitation 2 alone: ECERC with zero-shot LLM fusion
ECERC paper
L2 Keshav Mishra
Text t
Emotion RoBERTa
Audio a
MELD: 300-d
Visual v
342-d
Semantic s
RoBERTa, 1024-d
Speaker IDs
Who said each turn
Evidence Gating
Cross-modal sigmoid gates, 128-d each, 384-d output
Projection
1024-d to 128-d
Emotion Encoder
Key and value for f1, f2
Event Encoder
Key, value for f3, f4
Evidence as query
Speaker masks
Evidence-Cause Interaction: 4 cross-attentions
f1 Self-contagion
Same speaker's past turns
f2 Cross-emotion
Other speakers' past turns
f3 Self-event
The utterance's own event
f4 Cross-event
Other speakers' past events
Feature Gating
Element-wise sigmoid gate on each cause, 384-d each
Concatenate the four causes
4 × 384 = 1536-d fused feature R
Classifier
Linear layer: 7 emotions, focal loss
Log-linear LLM fusion
0.8 log p(ECERC) + 0.2 log p(LLM)
Qwen2.5-32B-Instruct
Zero-shot, never trained on MELD's labels
Output for each utterance
On the authors' checkpoints: wF1 67.26, mF1 54.25
